SUBJECT: **STATUS REPORT ON KEY INDICATORS OF PROGRESS, HOSPITAL OPERATIONS, AND OTHER ISSUES RELATED TO THE TRANSITION TO THE NEW LAC+USC MEDICAL CENTER – PROGRESS REPORT #103**

This is to provide your Board with the monthly report on the status of transitioning to the new LAC+USC Medical Center (LAC+USC). This report is the full monthly operational report with trends to include the month of July 2014.

Census Trending (ADC includes Psychiatric & Newborn Patients)

The Average Daily Census (ADC) for the month of July was 556 out of 676 licensed beds, an estimated 80% utilization rate (82% occupancy). The census for Medical/Surgical units was an estimated 90% utilization rate (92% occupancy) for July 2014.

Emergency Department (ED) Indicators

The attachment demonstrates an increase for ED boarding times, average daily census (ADC), ED wait time, and the rate of patients who left without being seen (LWBS) in comparison to June 2014. The number of patients transferred out was stable for this period. The Dangerously Overcrowding Level Comparison for July 2014 was 9.7% compared to 0.3% in June 2014. A separate graph was created to reflect the Urgent Care Center volume from January 2014 to present. This change decreases the total ED Volume data depicted as of January 2014. In addition, a graph reflecting the Continuing Care Clinic (CCC) volume from January 2014 to present has been added to the report. The CCC provides primary care services to uninsured and unempaneled patients at LAC+USC.

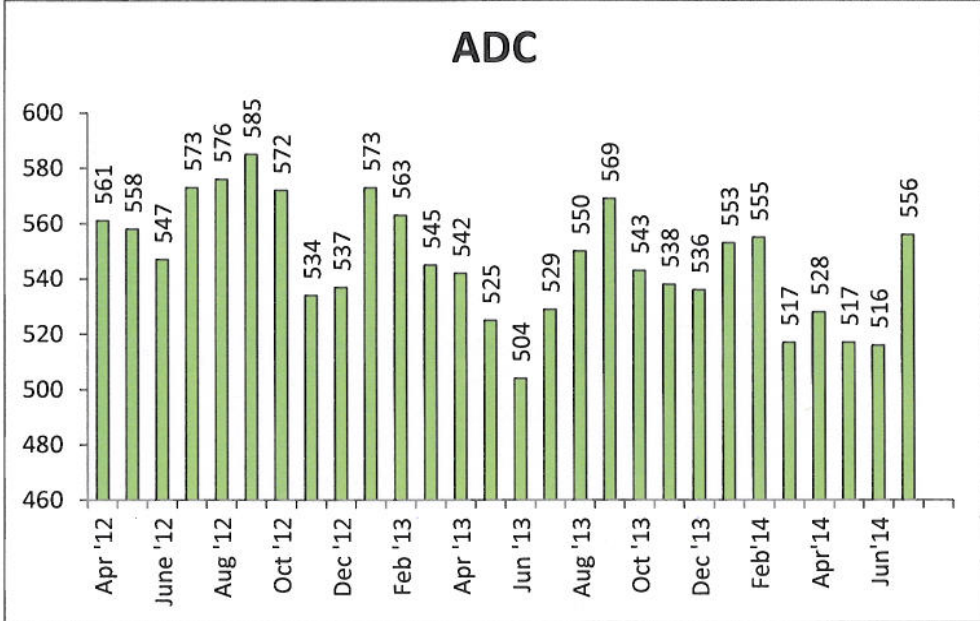

If you have any questions or need additional information, please contact me or Dan Castillo, LAC+USC Chief Executive Officer, at (323) 409-2800.

Medical
Center**

Definition:

A measure of the usage of the licensed beds during the reporting period that is derived by dividing the patient days in the reporting period by the licensed bed days in the reporting period.

Calculation:

The total number of admitted inpatients at 12:00 AM midnight, including women in labor, may include normal newborns and psychiatric inpatients divided by licensed or budgeted beds.

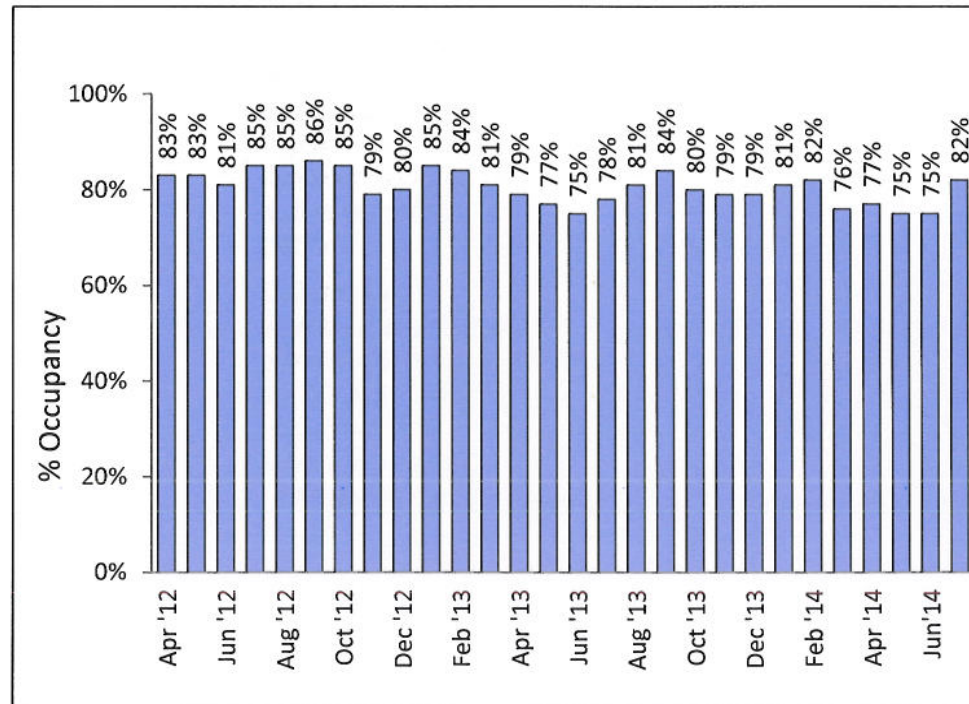

Source of Data:

Boarding
Time
(EDBT)

***Harris**
Rodde
Indicator

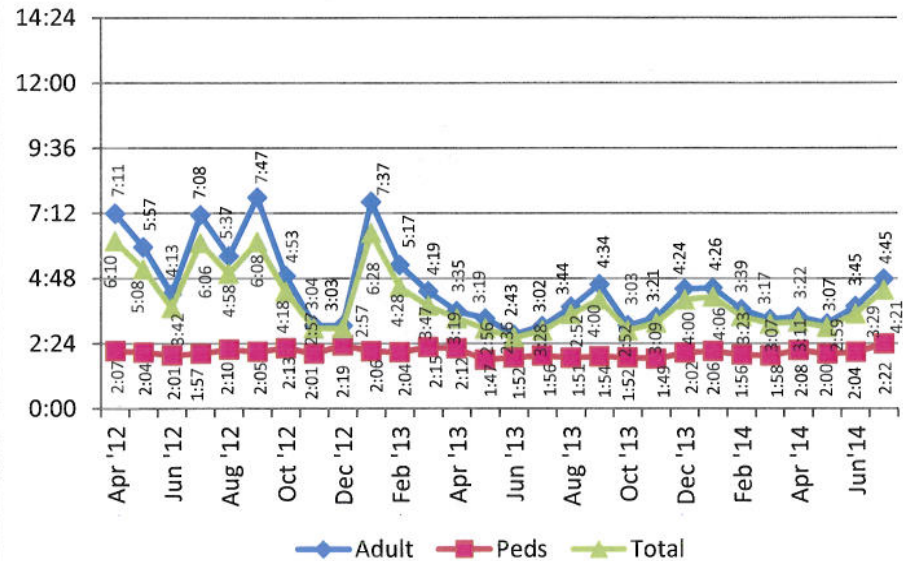

Boarding Time:
 Time from MD Admit time (effective date and time of pre-admit) to time the patient actually leaves the ED en route to assigned bed (effective date and time of the ED disposition).

Calculation:
 The middle value in the set of individual boarding times for the month arranged in increasing order. If there is an even number of values, then the median is the average of the middle two values.

Source of Data:
 Affinity

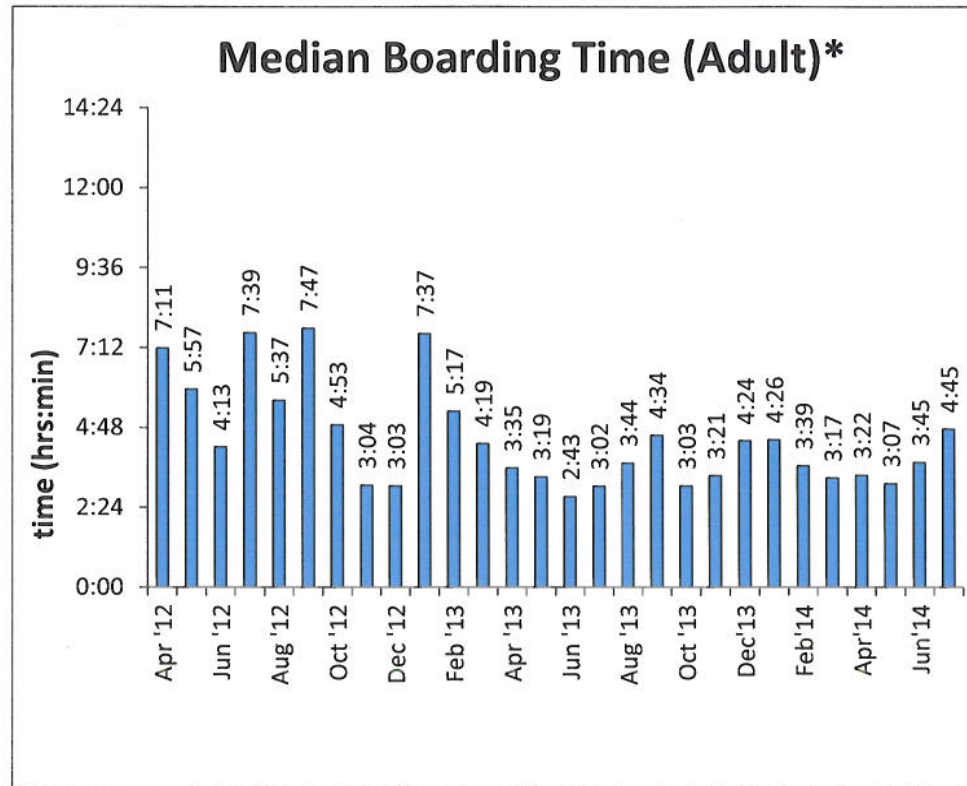

Target:
 Less than 7 hours.

**2d.
ED Wait
Time**

ED Wait Time:
Measured from time patient is triaged to time patient is either admitted or discharged reported as an arithmetic mean.

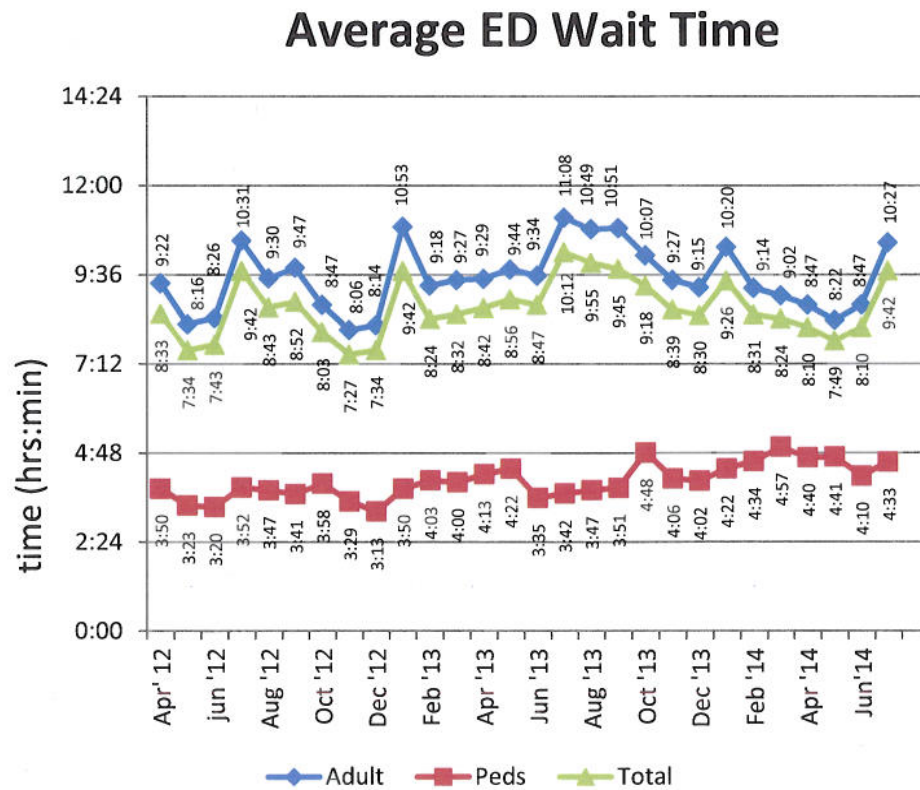

Definition:

Sum of all wait time values during the monthly reporting period divided by the total number of values.

Source of Data:
Affinity

Target:

No target value.
Lower numbers are better.

2e.
Left Without Being Seen (LWBS)

***Harris Rodde Indicator**

LWBS:

The total number of patients who left the ED without being seen by a physician reported as a percentage of all ED visits.

Calculation:

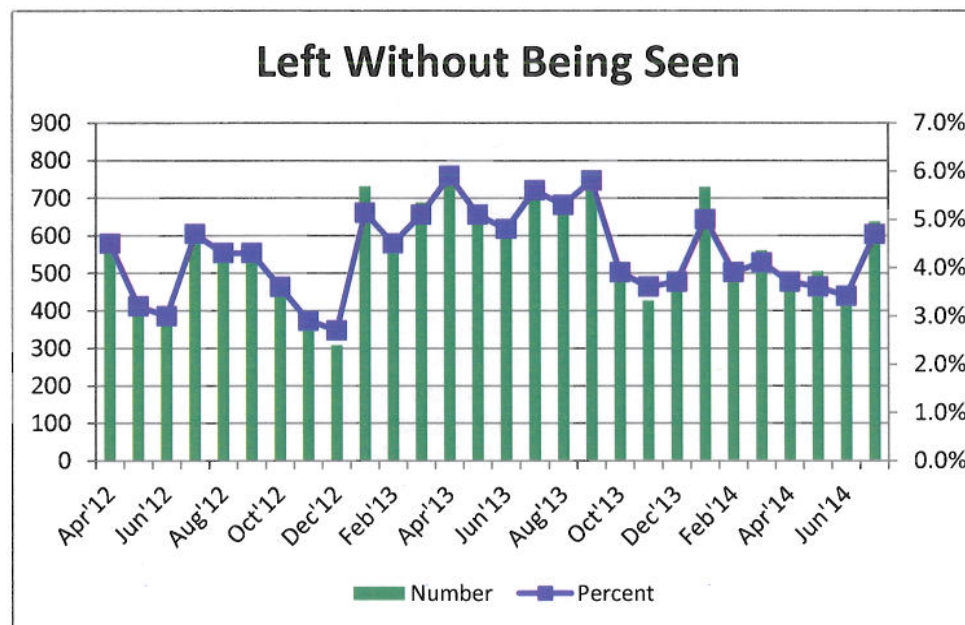

The total number of patients who left the ED without being seen divided by the total number of ED patient visits on a monthly basis.

Source of Data:

Affinity

Target:

No target value.
Lower numbers are better.

Indicator #2 - Emergency Department Metrics

**2f.
ED
Diversion**

ED Diversion:

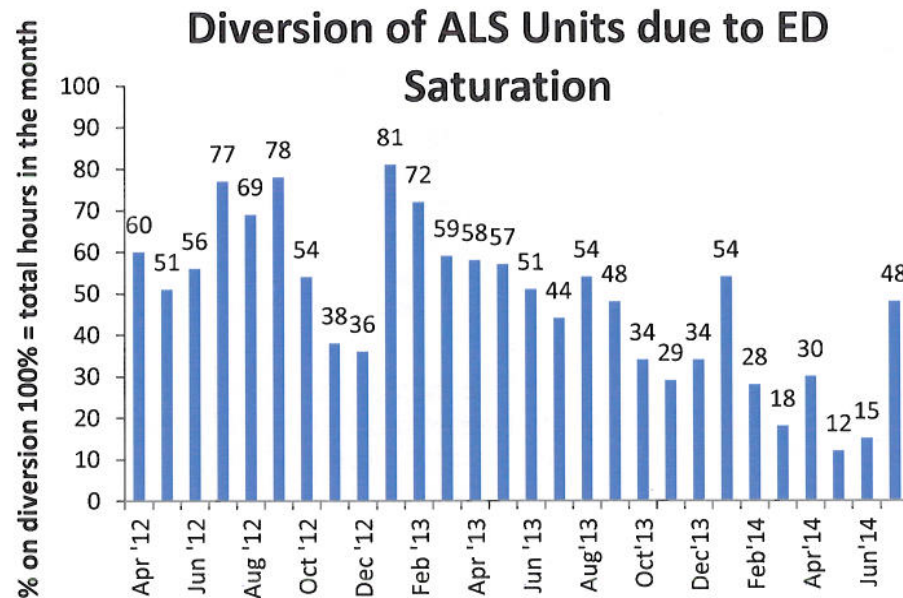

A percentage measure of the time the ED diverts ambulance traffic away from the ED, reported as a function of the reason for diversion on a monthly basis.

Calculation:

The total number of hours of ED diversion for a specific reason divided by the total number of available hours in a month.

Source of Data:

ReddiNet

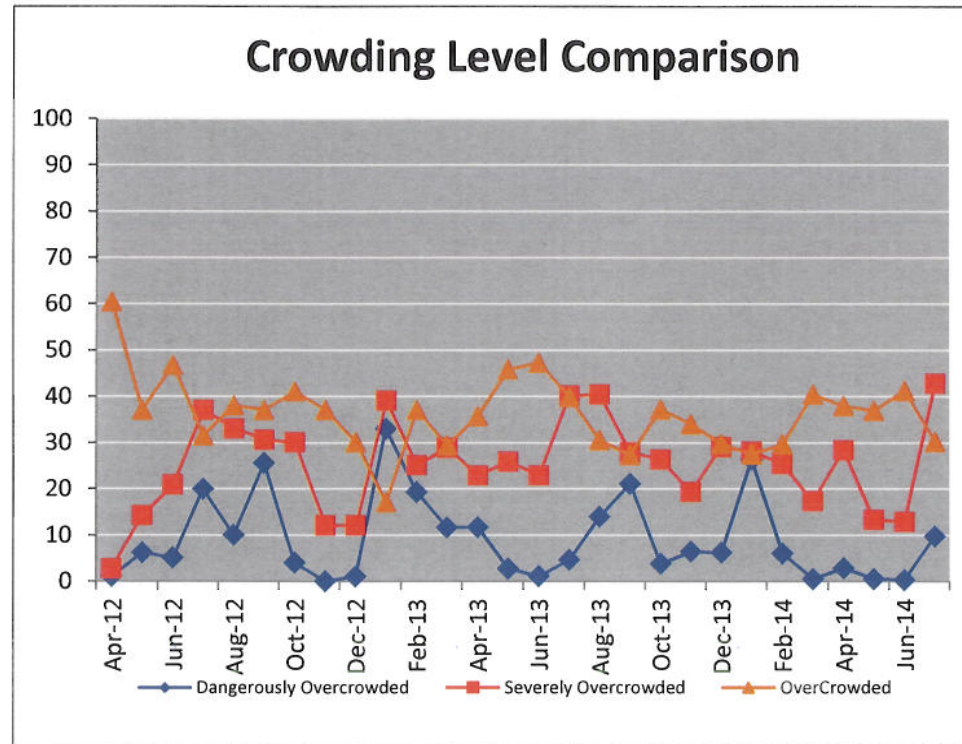

Key points:

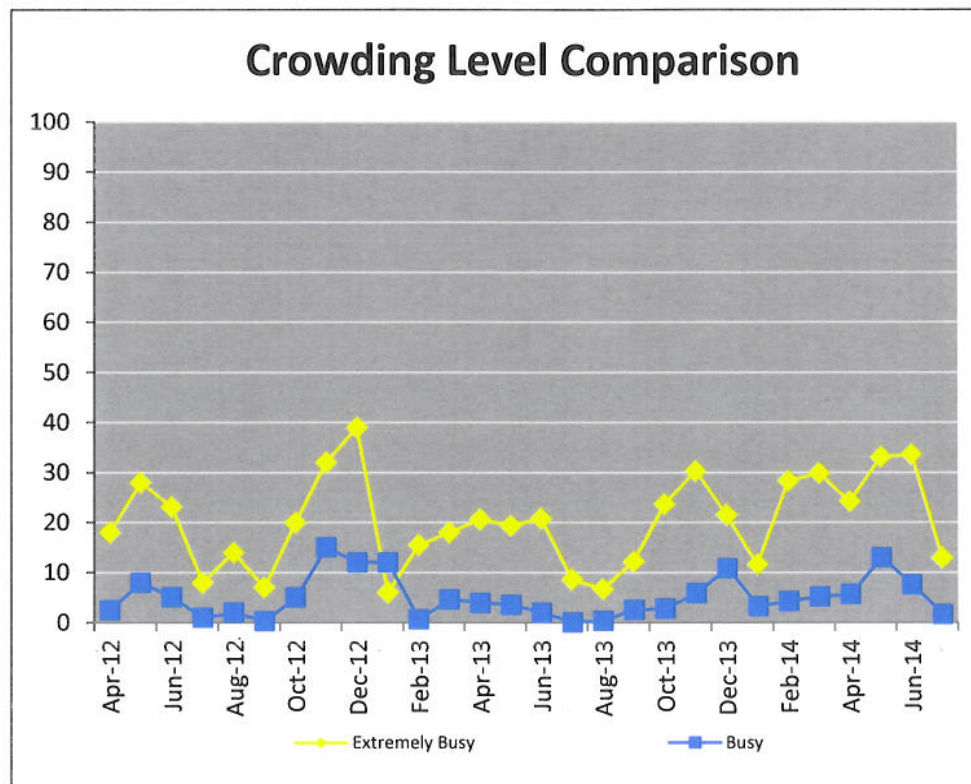

-- Diversion is for paramedic runs only; Basic Life Support ambulances still arrive.
-- When diversion is requested but all hospitals in the area are on diversion, patients go to the closest hospital. Therefore, ambulances often arrive while "on diversion".
